PROFESSIONAL SUMMARY

Software Developer with hands-on experience building full-stack web applications using Java, Spring Boot, React.js, MySQL, and REST APIs. Skilled in developing secure backend systems with Spring Security, JWT Authentication, Spring Data JPA, and MVC architecture. Strong foundation in Data Structures & Algorithms, object-oriented programming, and scalable application development. Seeking Software Developer, Java Developer, Backend Developer or SDE-1 opportunities.

TECHNICAL SKILLS

Languages	JavaScript, Java
Frontend	React.js, HTML5, CSS3, Bootstrap, Responsive Design
Backend	Spring Boot, RESTful APIs
Databases	MySQL
Tools	Git, GitHub, npm, Postman, VS Code

PROJECTS

Lumina – Smart City Safety Mapper | React.js · Spring Boot · Spring Security · MySQL · Google OAuth2
(<https://github.com/SuyogShirpe/lumina>)

- Developed a full-stack smart city safety platform enabling users to authenticate securely using Google OAuth2 and role-based access control.
- Implemented secure user authentication and authorization using Google OAuth2, Spring Security, and JWT, ensuring protected access to application features.
- Built RESTful APIs with Spring MVC and Spring Data JPA for incident management, user operations, and real-time location-based data retrieval.
- Integrated geolocation and interactive map services to display nearby incidents based on users' current location, improving situational awareness and community reporting.
- Designed an optimized MySQL database schema and followed MVC architecture and repository design patterns to build a scalable and maintainable application.

Real-Time Stock Screener | React · JavaScript · Custom Hooks · LocalStorage · Vercel
(<https://react-stocks-screener.vercel.app>)

- Built a React-based stock screener dashboard rendering 15 dynamically fetched trending stocks per session, integrating a third-party financial API to display live price data and market trends.
- Engineered interactive candlestick charts with up to 500 historical data points per stock using a charting library ApexCharts.js, enabling smooth technical price analysis.
- Implemented company-name based search with debounced input, replacing ticker-only lookup and reducing failed search attempts by ~35%, improving discoverability for non-expert users.
- Developed reusable custom React hooks for API data fetching and caching, cutting redundant API calls by ~60% and improving component reusability across the application.
- Built a LocalStorage-based persistent watchlist, enabling return users to resume their tracked portfolio instantly, improving session continuity and engagement.

EDUCATION

B.Tech — Computer Science and Information Technology
Malla Reddy Engineering College, Hyderabad | **CGPA: 8.5 / 10.0**

Aug 2023 – Jun 2027

CERTIFICATIONS

Data Structures & Algorithms using Java (NPTEL)

Jul – Oct 2025
